OVERALL DIGITAL PRESENCE SCORE

62/100

Optimization Opportunity

Category results

Website Experience — 18/25

Core pages are readable and navigable; mobile performance and clarity still have room to improve.

Local SEO Presence — 14/25

Service pages exist, but depth and local discovery signals could be stronger.

Reputation & Trust — 12/20

Some public trust signals are visible; credentials and testimonials could be more prominent.

Content Authority — 8/15

Service content is useful but thin in places that would help customers compare options.

Conversion Readiness — 10/15

Contact paths exist, though primary CTAs are easy to miss on key pages.

Key strengths

Primary services are clearly presented
Visitors can identify what the business offers without digging through unrelated pages.

Dedicated service pages exist
Major offerings have their own URLs, which supports clearer customer journeys.

A contact pathway is available
Customers can start an inquiry without leaving the site.

Areas for improvement

Service pages need deeper, more useful content
Several service pages lack detail customers typically need before requesting a quote.

Expand each priority service page with clear scope, process, and FAQs.

Primary CTAs are easy to miss
The main inquiry action competes with secondary links on key landing pages.

Make the primary contact CTA more prominent on homepage and service pages.

Mobile performance needs attention
Measured performance indicators suggest mobile users may wait longer than necessary.

Review mobile performance and usability on priority templates.

Trust signals could be stronger
Credentials and reviews are present but not consistently surfaced near conversion points.

Strengthen relevant trust signals near primary CTAs.

Suggested next steps

1. Improve dedicated service-page content.
2. Review mobile performance.
3. Improve visibility of primary CTAs.
4. Strengthen relevant trust signals.
5. Improve customer inquiry pathways.
