Digital Presence Report Card

Example Service Company

example-service.com

Status: **Complete Audit (Demo)** Date: Illustrative date — demo only

Report ID: `DPRC-DEMO-COMPLETE-001` Scoring: `strict-v1.0` Coverage: 92%

Illustrative demo report — not a verified assessment result.

Overall digital presence score

62/100

Optimization Opportunity

Evidence coverage: 92%

Category results

Website Experience

`18/25 · assessed`

Core pages are readable and navigable; mobile performance and clarity still have room to improve.

- **Primary services are easy to find**
  Homepage and navigation clearly list core offerings.
- **Mobile layout gaps**
  Some content blocks require horizontal scrolling on narrow viewports.

Local SEO Presence

`14/25 · assessed`

Service pages exist, but depth and local discovery signals could be stronger.

- **Service pages present**
  Dedicated URLs exist for major services.

Reputation & Trust

`12/20 · assessed`

Some public trust signals are visible; credentials and testimonials could be more prominent.

- **Testimonials visible**
  Customer quotes appear on a dedicated page.

Content Authority

`8/15 · assessed`

Service content is useful but thin in places that would help customers compare options.

- **FAQ coverage incomplete**
  Only a short FAQ is available for one service line.

Conversion Readiness

`10/15 · assessed`

Contact paths exist, though primary CTAs are easy to miss on key pages.

- **Contact form available**
  A form is linked from the header.

Strengths

- **Primary services are clearly presented**
  Visitors can identify what the business offers without digging through unrelated pages.

  Homepage service list (illustrative)

- **Dedicated service pages exist**
  Major offerings have their own URLs, which supports clearer customer journeys.

  Service URL inventory (illustrative)

- **A contact pathway is available**
  Customers can start an inquiry without leaving the site.

  Header contact link (illustrative)

Improvement opportunities

- **Service pages need deeper, more useful content**
  Several service pages lack detail customers typically need before requesting a quote.

  Expand each priority service page with clear scope, process, and FAQs.

- **Primary CTAs are easy to miss**
  The main inquiry action competes with secondary links on key landing pages.

  Make the primary contact CTA more prominent on homepage and service pages.

- **Mobile performance needs attention**
  Measured performance indicators suggest mobile users may wait longer than necessary.

  Review mobile performance and usability on priority templates.

- **Trust signals could be stronger**
  Credentials and reviews are present but not consistently surfaced near conversion points.

  Strengthen relevant trust signals near primary CTAs.

Recommended actions

1. Improve dedicated service-page content. (high priority)
2. Review mobile performance. (high priority)
3. Improve visibility of primary CTAs. (high priority)
4. Strengthen relevant trust signals. (medium priority)
5. Improve customer inquiry pathways. (medium priority)

Unable to verify

Not Assessed does not automatically mean the business failed the check.

- **Restricted Instagram profile visibility**
  Public profile details were limited at observation time and were marked Not Assessed.

Methodology & limitations

Five-category public digital-presence framework: Website Experience (25), Local SEO Presence (25), Reputation & Trust (20), Content Authority (15), Conversion Readiness (15).

Scoring version: `strict-v1.0`

Publicly observable website and business signals only. Not a measure of service quality or official search rankings.

Approximately 92% of planned public checks had usable evidence in this demo fixture.

Limitations

- Restricted social or directory profiles may be unavailable.
- Performance measurements depend on accessible third-party tools.
- A complete numerical score is shown only when sufficient evidence exists.

Sources

- Service page sample set — Demo observation

Partial audits omit an overall /100 score when evidence is incomplete. Limited Visibility Snapshots apply when a website cannot be confidently verified — they present available observations without inventing scores.

This report evaluates publicly observable digital presence, not actual service quality or official search-engine rankings.
